SUMMARY

Lead Developer with 6+ years of experience building full-stack and mobile apps in fast-paced, product-focused environments. I've led distributed teams, improved engineering workflows, and shipped features that drove real business outcomes, including helping boost annual revenue by \$5M. I bring a balance of hands-on technical leadership and cross-functional collaboration, with a strong focus on code quality, scalability, and delivering real value to users.

EXPERIENCE

Canstar

Brisbane, Australia

Lead Developer

October 2024 - October 2025

- Led a cross-functional team of developers and testers across India and the Philippines, ensuring smooth collaboration and high-quality delivery.
- Introduced a new Git branching strategy and hosted training sessions across teams, significantly reducing merge conflicts and improving development efficiency.
- Delivered key features and integrations to support the launch of a new health insurance vertical, contributing to a \$5M annual revenue increase.
- Collaborated closely with [It's My Group](#) to successfully integrate external systems and launch the health insurance offering.
- Initiated ongoing brown bag sessions with interactive Kahoot quizzes to foster team learning and knowledge sharing.
- Spearheaded the development of a new CMS using Payload, laying the groundwork for future migration from WordPress.
- Rebuilt and replaced 9+ financial calculators in-house within two weeks, eliminating reliance on a costly third-party provider and saving the company \$40K annually while improving UI and support responsiveness.
- Partnered closely with the design team to implement an atomic design system, aligning components across Figma and code to improve consistency, streamline development, and reduce rework across teams.

Mosafe

Brisbane, Australia

Technical Lead

May 2022 - October 2024

- Progressed from Senior Software Engineer to Technical Lead, driving the development of scalable software solutions and leading a team of 3 developers.
- Responsible for end-to-end software development, encompassing system architecture design, coding implementation, and seamless delivery of robust applications.
- Aligned technical solutions with business goals through close collaboration with stakeholders and product owners.
- Scaled the product to support thousands of concurrent users with robust architecture and performance optimizations.
- Collaborated closely with product owners and stakeholders to align technical solutions with business objectives and customer requirements.
- Streamlined development workflows, optimized tooling, and implemented new technologies and frameworks to boost developer productivity and enhance product capabilities.

Senior Software Engineer

June 2021 - May 2022

- Drove the evolution of the tech stack, contributing to the transition of React codebase to TypeScript for improved code maintainability and scalability.
- Collaborated closely with external agencies to launch the initial version of the brand website, subsequently leading its in-house maintenance and enhancements.
- Demonstrated versatility by seamlessly transitioning between diverse projects and technologies, adeptly coding across multiple platforms and frameworks to meet evolving business needs and technical requirements.
- Integrated CI/CD pipelines using Jenkins to streamline deployments and improve delivery speed.

Freelance/Contracts

Brisbane, Australia

Software Engineer

Throughout my freelance career, I have specialized in the MERN stack with TypeScript, accumulating around 3+ years of experience in this technology stack.

- Developed a contract management platform with e-signature capabilities, similar to DocuSign.
- Created Instagram growth tools, automating engagement and analytics workflows.
- Built venue booking and table ordering apps, including QR code systems for reservations and ordering.
- Engineered B2B delivery management software to optimize logistics and streamline business deliveries for Hungry Jacks.

RECENT PROJECT

Cargo Bear

Solo Full-Stack Developer

6 months

- Architected and delivered a full-stack platform using MERN + TypeScript, including a React Native driver app, Next.js customer portal, and internal admin dashboard with real-time analytics.
- Integrated maps, geolocation, image capture, and push notifications to enable live delivery tracking and route management.
- Designed scalable backend services with Node.js, Express, MongoDB, and AWS (S3, SES, SNS, SQS), supporting file uploads, SMS/email notifications, and role-based access control.
- Implemented real-time updates via Socket.IO, allowing seamless communication between drivers, customers, and admins.
- Delivered the project end-to-end while collaborating directly with the CEO and designer, demonstrating product ownership and cross-functional leadership.

ADDITIONAL

FULL STACK: Typescript, Javascript, React, React Native, Next.js, Express.js, Kafka, BullMQ, NodeJS, HTML5, CSS, Tailwind, Stylex, Ruby, Ruby on Rails

DATABASE: MongoDB, Redis, Postgres

ADDITIONAL SKILLS & TOOLS: AWS, Vercel, Digital Ocean, Cloudflare, Harness, Linux (Ubuntu), Payload CMS, Kafka, BullMQ, Bitbucket, Github, Git, Agile Project Management Methodology, Linear, PM2

INTERESTS: Cryptocurrency, Gaming, Entrepreneurship, Artificial Intelligence
